

# Rega's Zero Rear Reflection Technology

Key:

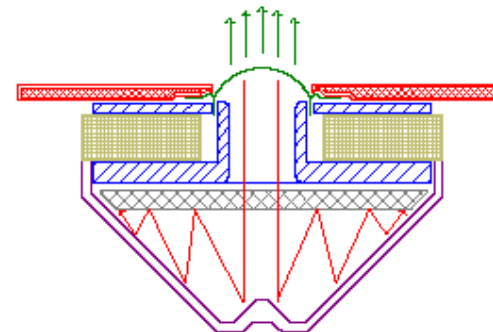

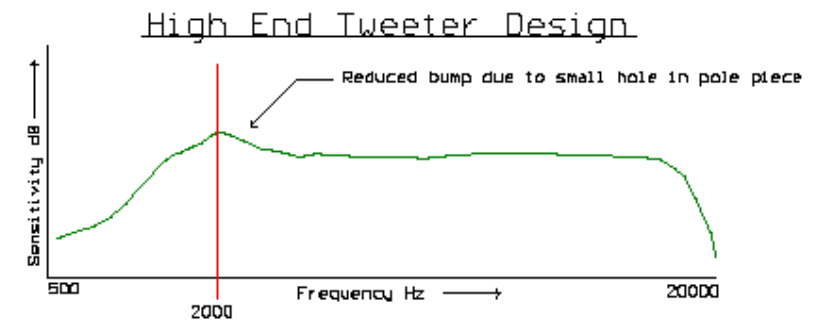

- = Good Sound Radiation
- = Bad Sound Reflection

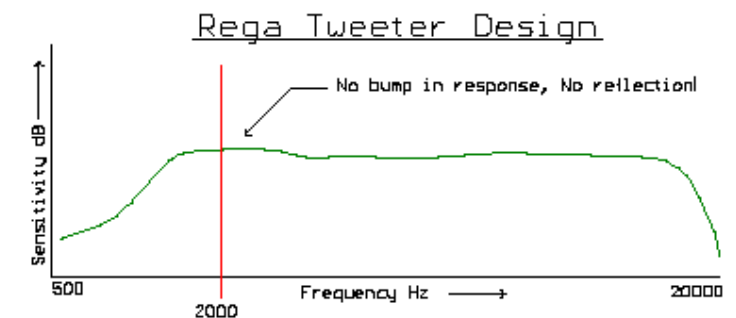

No hole in pole piece  
Lots of reflection

Small hole in pole piece  
Damping is used but there is still reflection

Large hole in pole piece  
Small amount of damping and  
No reflection

Rega ZRR Technology helps maintain a distortion free response. In the rear cavity of the ZRR there is very little reflection back through the tweeter dome. This means a very clean, clear sound reproduction.
